Patch Testing: Test Concentrations And Vehicles For 2800 Allergens

Anton C. de Groot

Patch testing is a sound, relatively safe and reasonably reliable method of identifying contact allergens in patients with contact dematitis. It has been clearly shown that patch testing is necessary...Â De Groot A.C., Frosch P.J. (1995) Patch Test Concentrations and Vehicles for Testing Contact Allergens. In: Rycroft R.J.G., Menné T., Frosch P.J. (eds) Textbook of Contact Dermatitis. Springer, Berlin, Heidelberg.
