INTRODUCTION

A full-color atlas of pain medicine focusing on intraoperative strategy and operative technique

Atlas of Pain Medicine Procedures is a full color atlas of pain medicine featuring newly created medical illustrations and minimal text designed to teach readers the latest operative techniques.

The atlas is divided into three sections, but the focus is on interventional pain medicine since the vast majority of operations fall within that area. There are about 40 procedures described. Each procedure begins with an algorithm that addresses the strategy for diagnosis and treatment. Subsequently, the details of the procedure are written under several consistent headers, and this text is set beside newly created medical illustrations. Also included are several images of fluoroscopy and other technique oriented photos so that the ideal view of the topic is juxtaposed with an actual image of the procedure. The medicine and palliative care and hospice sections will describe the procedures that are specific to those areas and will include algorithms to help the reader with management strategy.
• Market: Pain management physicians (10,000), anesthesiologists (40,000), neurologists (18,000), and psychiatrists (80,000 worldwide)
• The focus on intraoperative strategy and technique makes this book unique in the marketplace
• The full-color illustrations were created specifically for this book

DESCRIPTION

CONFIDENTLY PERFORM ESSENTIAL PROCEDURES WITH THE MOST COMPLETE FULL-COLOR GUIDE TO INTERVENTIONAL PAIN MEDICINE

Chapters are consistently designed—covering indications, procedural steps, and complications—with the text presented in a succinct, bulleted style.

Atlas of Pain Medicine Procedures begins with an incisive review of basic applications such as safety and image guidance and then proceeds to core procedures, from spinal interventions and musculoskeletal injections to peripheral nerve blocks.
