The support provided by the psychological intervention is focused on Book Review: Membrane Mechanisms of Drugs of Abuse Although substantial gains in the clinical practice of pain management have been. medical practice, even as more sophisticated psychological interventions for
Vu. Lesson 25. Psychological interventions and their goals. Defining the intervention. In a most general way, psychological intervention is a method of inducing changes in a person's behavior, thoughts, or feelings. Although the same might also be said for a TV commercial or the efforts of teachers and close friends, psychotherapy involves intervention in the context of a professional relationship. Psychologists are involved in intervention whenever they purposefully try to produce change in the lives of others. We will consider three types of interventions that are intended to produce change in people's lives. First, there has been a recent emphasis in clinical psychology (and, indeed, in psychology in general) on.
