**Teaming with Microbes**

By : **Wayne Lewis**

Healthy soil teems with life—not just earthworms and insects, but a staggering multitude of bacteria, fungi, and other microorganisms. Chemical fertilizers injure the microbial life that sustains healthy plants, and the soil becomes increasingly dependent on artificial, often toxic, substances. But there is an alternative: by strengthening the soil food web—the complex world of soil-dwelling organisms—gardeners can create a nurturing environment for plants. Teaming with Microbes extols the benefits of cultivating the soil food web. It clearly explains the activities and organisms that make up the web, and explains how gardeners can cultivate the life of the soil through the use of compost, mulches, and compost tea. With Jeff Lowenfels’ help, everyone—from devotees of organic gardening techniques to weekend gardeners who simply want to grow healthy, vigorous plants—can create rich, nurturing, living soil.

**Beyond Buds**

By : **Ed Rosenthal**

Beyond Buds is a handbook to the future of marijuana. Prohibition's end has led to a technological revolution that's generated powerful medicines and products containing almost zero carcinogens and little smoke. Marijuana icon Ed Rosenthal and leading cannabis reporter David Downs guide readers through the best new consumer products, and demonstrate how to make and use the safest, cleanest extracts. Beyond Buds details how award-winning artisans make hash and concentrates, and includes modern techniques utilizing dry ice and CO2. The book is a primer on making kief, water hash, tinctures, topicals, edibles, and other extracts from cannabis leaves, trim, and bud bits, and it goes on to explore and simplify the more exotic and trendy marijuana-infused products, such...
as butane hash oil (BHO), shatter, wax, and budder. More complex than lighting a joint, these innovative products call for new accessories – special pipes, dabbing tools, and vaporizers – all of which are reviewed and pictured in the book. Beyond Buds expands on Rosenthal’s previous book Ask Ed: Marijuana Gold – Trash to Stash. Completely updated with full-color photographs that are both “how-to” guides and eye candy, this book enables not only the health-conscious toker but also the bottom line-driven cultivator.

The cacti and succulents generally require at least 4 hours of bright, direct light each day. However, some including the jungle cacti prefer medium light intensities and should never be placed in direct light except during the winter. Overall, if you wish to move a plant which has been grown in indirect light to direct light, then this should be done gradually.
