Databases are at the heart of most mobile apps, so choosing the right one will be critical to your application’s success. At its most basic, databases collect and store user information during a mobile app’s lifecycle. A relational database (a common database solution where data is stored in the form of data tables with a unique key field that’s used to connect to other related tables) is important to choose the right one as it will be a long-term decision that can be expensive and complicated to change later on. But with so many options in the marketplace, how do you select the right database for your mobile application offering? A lot of mobile applications today evolve to add a web companion app or a native desktop, so that something you have to think about. Choosing a domain name can be stressful because you don’t want to make a mistake. Follow our 14 step framework to choose the best domain name for your site. Choosing the right domain name for your website is crucial for your success. If you choose the wrong domain name, then it can be a hassle to switch later on without hurting your brand and search rankings. That’s why it’s extremely important that you choose the best domain name from the start. When first starting out, it can be hard to come up with catchy business name ideas with a perfect domain name. In this article, we’ll share all the tools and tips you need to get domain name ideas, choose the best domain name, and register your new domain (for free). 14 Tips for Choosing the Best Domain Name Choosing the right database isn’t always easy, but getting it right could prove critical to your business. But how do you decide on which database? The Blueberry Insights Blog. How To Choose A Database For Your Business. Written by Raspal Chima on 24th January 2018. Choosing the right database isn’t always easy, but getting it right could prove critical to the future success of your business. But how do you decide on which database? If you’re new to databases, it’s best to get things right from the outset as it may not be simple or cost effective to move to a different database later. Equally, if you’ve an existing database that needs updating, it’s usually best to bite the bullet and upgrade to a system which is fast, secure and resilient.
