Peter Essick's "Our Beautiful, Fragile World" takes one inside the mind of one of the world's foremost landscape and nature photographers. While there is a big dose of beauty, there is also a healthy shot of what humanity is doing to planet earth, and thus, to itself. In short, our beautiful, fragile planet is worth protecting, and we all need to do our part. Fulfilling that stewardship duty will require thoughtful contemplation, which one will certainly do while absorbing Essick's stunning images. Web designers are artists too, and if they look to nature for web design inspiration, and engage their right brains, they have a lot to work with. Here is what can be taken from nature as design is created. Consistency. Consistency relates to the concepts of harmony and unity. As designers consider what they see in nature, they need to find ways to translate that into inspiring web design. Modern web design inspiration can take much from the contrasts in nature that make our world interesting. Translating these contrasts of colors, shapes, sizes, and textures to web design elements will achieve that same interest. Proportion. Ensure that your content and elements flow logically one to the next. Textures. Texture adds interest, and nature is full of them. Making clear why the future of biodiversity matters, Fragile Web--which takes its name from the delicate mechanism that holds all life together--unites a team of international experts to explore the wonder of the natural world. Drawing on the very latest research, the book explains what biodiversity is and explores its evolution, from 3.5 billion years ago to the present day. It discusses the importance of the world's ecosystems and how directly or indirectly humans are responsible for the fate of nature. Crucially, it also examines what can be done to protect the natural world and why it
