North Atlantic Seaway: An Illustrated History Of The Passenger Services Linking The Old World With The New In Four Volumes

N. R. P Bonsor
She taught me how to be a secret service agent in two days. Perhaps the most famous play Kate has worked on recently was called Noises Off. She taught the cast how to fall down stairs without breaking any bones. The problem with the design I'd done earlier was that it seemed flat, two-dimensional. So when I sat down to enter the competition, I thought back to a field trip in elementary school to a newspaper office where we'd been shown how paper was fed over rollers as it was printed. The three arrows in it look like strips of folded-over paper. The North Atlantic region is one of the busiest in the world in terms of air-traffic density, with around 1000 flights flying over it everyday (NavCanada, 2011). The North Atlantic Track System (NATS) has been set up by ICAO in order to cope with this. This article provides an overview of NATS. The exact location of the track changes daily according to weather and traffic demands. In order to deal with the high traffic, the entire area has been designated as MNPS (Minimum Navigation Performance Specifications) airspace, i.e. A/C must be equipped and maintained so as to be continuously capable of a specific level of navigation accuracy. NATS/MNPS Airspace.
