History Of Transplantation: Thirty-five Recollections

Paul I Terasaki

transplantation, we identified 30 papers describing five technical challenges relevant for head transplantation (Fig. 1). As regards the facts, it can be said that, although the history of attempts to perform a body transplant dates back almost a century, there are many limitations preventing it from being performed with our current knowledge. This is due to the fact that no serious and rigorous preclinical research has been conducted (at most some anecdotal data can be found).
