Globalization influences the economy of all the countries. It affects the production of goods and delivery of services, the labor utilization, investments, technology and its propagation in one country to some other. All of this is reflected in the efficiency of creation, production of labor and competitive capability. The role of MNC develops and so do supranational economical buildings and the organizations, respectively (like the International Monetary Finance, International Standard bank for Reconstruction and Development, the International Financing Organization and other). At the present time 80% of most recent technologies are created by MNC, whose income in a number of cases surpass the gross nationwide income of some rather large countries. 

DENMARK: Globalization and the Welfare State Today Denmark is one of the most prosperous countries in the world. Unemployment rates are low. Denmark also has low inflation and a surplus on both balance of payments and public expenditure. The World Economic Forum’s 2008 competitiveness index ranks Denmark in its Top Three world-wide. And the World Transparency Index ranks it as the world champion in non-corruption. Furthermore it should be noted that other international comparisons nominate the Danes as the happiest people in the world! Denmark’s success is so impressive.
