Darwinism emerged in the 19th century as the restating of a myth, dating back to the Sumerians and Ancient Greece, by the amateur biologist Charles Darwin and has since then formed the fundamental idea behind all the ideologies that have been harmful to mankind. Wearing a so-called scientific mask, it allowed these ideologies and their supporters’ practical measures to win a false legitimacy. By means of this false legitimacy, the theory of evolution soon left the fields of knowledge of biology and paleontology and began to comment on fields from human relations to history and to influence fie
