References

The number of references: 300.
Every time the journal is postponing the date of publication due to some technical errors. I have not included it in my CV yet but can include it as referred above. Regards.

The question is about how to write a reference to an article on a CV, not how to cite the article. These are two different things. A CV displays your work, including that which is in progress, so having a section of “in review” and “in press” publications is acceptable. If this is about citing the article within another article, do not do it until it is actually published and has a doi. 3rd Mar, 2019.

This referencing style sheet is to be used in conjunction with the Library’s general Guide to Citing and Referencing. IEEE style is used mainly in Electronic and Electrical Engineering and Computer Science. This citation leads your reader to a full reference to the source in the list of references at the end of your work. Each citation number should be enclosed in square brackets on the same line as the text, before any punctuation, with a space before the bracket [2]. Once a source has been cited, the same number is re-used for all subsequent citations to the same source.
