Charles Hartshorne: A Secondary Bibliography – Religion Online
Unlike theology both philosophy and science follow logical methods to gather knowledge. However, the methods they use are a lot different. Philosophy naturally highlights on a biased mould in gaining knowledge as it states the importance of an individual in the universe as well as in the society. The issue is can philosophy advance by itself, without the support of science? Can science work without philosophy? The answer is even though philosophy and science are now two unique areas, to achieve significant knowledge, mix together the outcomes of both domains is a must. Science, without philosophical process, turns into no reasonable findings. But, philosophy, without the logical methods of science, results in nonsense.
